

MYPMAGENT

I built a PM agent in 4 days.

Raw idea → PRD + Linear-ready tickets.
With you in the loop at every step.

SWIPE TO SEE HOW IT WORKS →

01 / 09

THE PROBLEM

60–90

minutes

That's how long PMs spend per idea just to get to a PRD and tickets their team will actually use.

Existing tools generate generic output.
PMs end up rewriting half of it.

THE SOLUTION

*The PM stays
in control at
every step.*

The agent clarifies, plans, and waits for your approval before writing a single word. No surprises.

CLARIFY PLAN DRAFT PRD GENERATE TICKETS

*Paste a
messy idea.*

AGENT ASKS

"Who specifically feels this pain — a PM at a startup or an enterprise team?"

3–5 targeted questions. Each explains why it matters.

It plans before it writes.

The agent proposes a 7-section outline with a ticket estimate. You edit and approve before a word is drafted.

USERS

GOALS

NON-GOALS

SOLUTION

METRICS

*PRD writes
itself, section
by section.*

Written to the standard of a staff PM — quantified problems, named personas, explicit tradeoffs. No filler.

Edit inline. Regenerate with feedback. Revise the whole thing if needed.

Linear-ready tickets.

T-001 / ADD CSV EXPORT

Priority: P1 • Estimate: M

Given a user on Analytics, when they click Export, then a CSV downloads within 3 seconds.

Imperative titles. Given/When/Then criteria. Priority, estimate, labels. Copy as markdown or Linear CSV.

HOW IT'S BUILT

Forked [Hermes Agent](#) by Nous Research — open-source, OpenAI-compatible API. Added 4 custom PM skills on top.

Zero glue code. All PM logic lives in the skills.

Total cost across 4 days of dev: **under \$2.**
